

Linux Common Issues

1. AppArmor is Disabled
2. Apache2 Is Enabled
 - a. Server tokens disabled
3. Remove vsftpd service (sometimes)
4. Enable audit service
5. A default minimum password age is set (the /etc/login.defs)
6. Disable guest account
7. Unauthorized Softwares (
 - a. John
 - b. WireShark
 - c. Ophcrack
 - d. Aircrack-ng
 - e. Sucrack
 - f. Wapiti
 - g. apache2(if not given)
 - h. Yersinia
8. Make sure Softwares purged
 - a. `sudo apt-get autoremove --purge -y`
9. SSH
 - a. Permit Root Login: False
 - b. Permit Empty Password: False
 - c. Passwd/Groups/Shadow Problems
 - i. Passwd unauthorized user
 - ii. Group problems
 - iii. Shadow problems
10. Update daily (software manager)
 - a. `sudo mintupdate-automation upgrade enable` for mint
11. update firefox
 - a. Block dangerous downloads
12. Sysctl
 - a. IPv4 TCP TIME-WAIT: `net.ipv4.tcp_rfc1337 = 1`
 - b. IPv4 TCP SYN cookies enabled: `net.ipv4.tcp_syncookies = 1;`
 - c. IPv4 IP forwarding disabled(0): `net.ipv4.ip_forward = 0`
 - d. `Kernel.kptr_restrict = 2` (kernel pointers hidden from unprivileged user)

- e. `Net.ipv4.icmp_echo_ignore_broadcasts = 1`
- f. `Kernel.unprivileged_bpf_disabled = 1`
- g. `kernel.dmesg_restrict=1`
- h. `Kernel.dmesg_restrict = 1`
- i. `ipv4.conf.all.send_redirects=0`
- j. `ipv4.conf.default.send_redirects=0`
- k. Source routing is disabled = `net.ipv4.conf.all.accept_source_route=0`

Harder Issues:

- a. `sudo snap warnings` -> check for any desktop related issues.
- b. Logrotate.timer enabled (`sudo systemctl (enable/start) logrotate.timer`)
- c. Run `ss -tulnp` command in terminal to identify list of process running on a socket.
You can also find out which process is running and what port it is being used to connect to
- d. How to find out which Go program decrypts or opens a file.

`Chmod 755 ./my_program`

`strace -f -e trace=%file -o trace.log ./my_program`

the `-e trace=%file` option filters for file-related system calls.

The output is redirected to `trace.log` using the `-o` option.

`objdump -t ./my_program | grep 'open'`
